

Activities Report

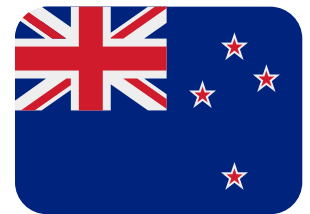

Environmental sustainability

Environmental sustainability

Rescue good fit Food , Fish head and frames , Promote maximum utilization , Reduced wastage , Educational Workshops and Awareness Campaign

NEW ZEALAND

HOPE's activities bring environmental impact and a sign of our commitment to environmental sustainability in New Zealand

Food insecurity - 40% of NZ households experience food insecurity. 19% of children live in homes experiencing food insecurity.

We run a Food distribution service titled "Food Watch Program" where rescued food is collected from groups such as Bread & Butter, Salvation Army, Fair Food, Tegal Chicken and Supermarkets. Together we filled hungry bellies of families who simply struggle to put food on their tables. We ensured culturally appropriate foods were donated to over 32 ethnic communities.

Over 1500 families received more than 15,000 food parcels during the last financial year. Our support also included families that, through language or cultural barriers, don't seek help from Ministry of Social Development (MSD) or mainstream agencies.

Educational Workshops and Awareness Campaign

HOPE incorporates climate change into its operations in accordance with New Zealand's climate change policy, which is aligned with the Paris Climate Change Agreement signed in France in 2015.

HOPE encourages families to minimize climate impact by using reusable shopping bags when families come and pick their food parcel and do their daily grocery shopping. HOPE handout recycle bags to families those have limited budget and cant afford to buy.

We have set up a plastic bag recycling depot at our base. We encourage families to bring in their old ones for recycling, after they've re-used them several times

FOOD WATCH PROGRAM

Supporting Families
Environmental
Sustainability

23.03.2022

Kai Ika (Kai means Food and Ika means Fish in Maori language) is a new partner with whom we have been collaborating to connect communities through fish head and frames distribution. The collaboration reduced insecurity, and minimized wastes.

To reduce environmental impact, we promote the usage of reusable bags rather than plastic bags and encourage people to use recycled materials.

HOPE address food insecurity in vulnerable communities by rescuing good fit food and fish head and frames that could go to landfill .

HOPE proudly collaborate with The Kai Ika project and every week receive more than **200 KG** fish head and frames and these are given out to families to make a use of these surplus fish parts.

Families reported that they enjoy by making soup and different dishes. Families also expressed their thanks and told that due to high price of fish and meat is not affordable and they are very thankful.

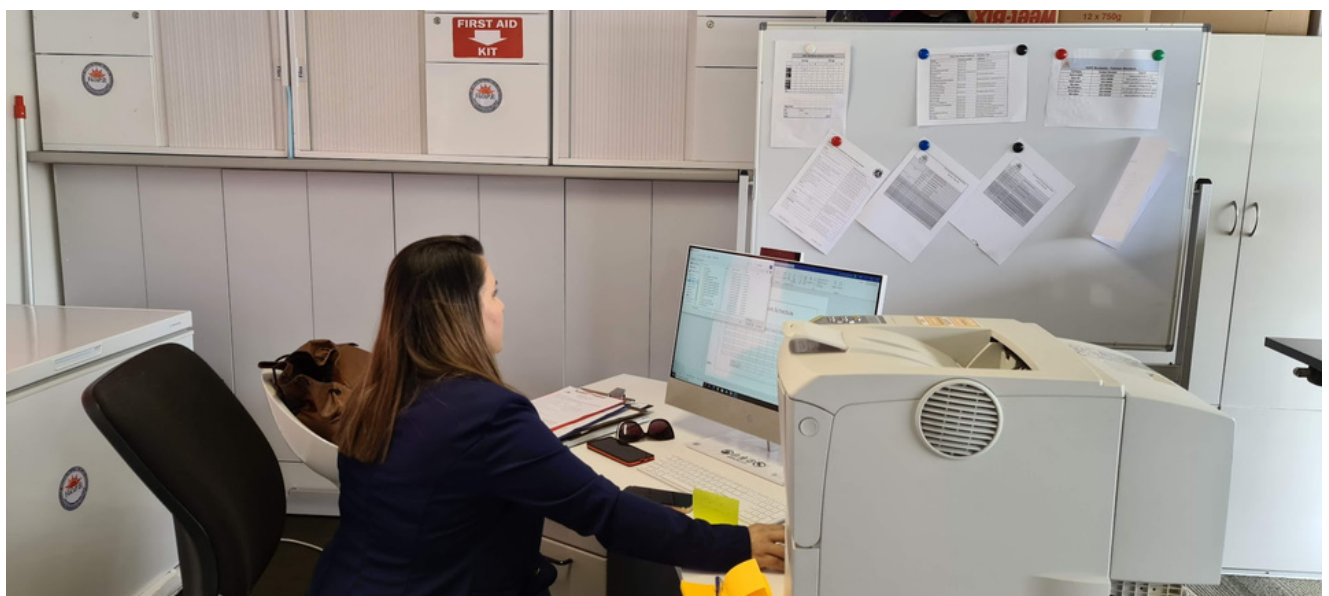

**RECYCLE UNWANTED ITEMS
RECYCLED/DIVERTED FROM LANDFILL**

Collected unwanted items from All Heart NZ

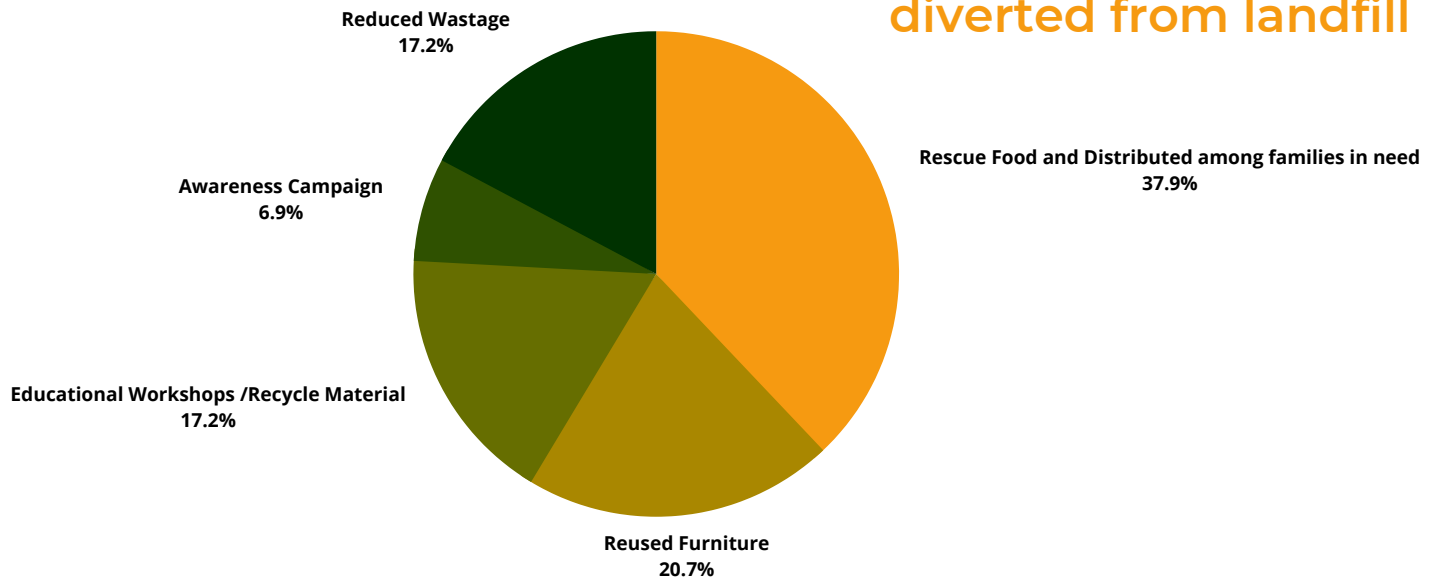

Encourage communities to Reuse and provide education

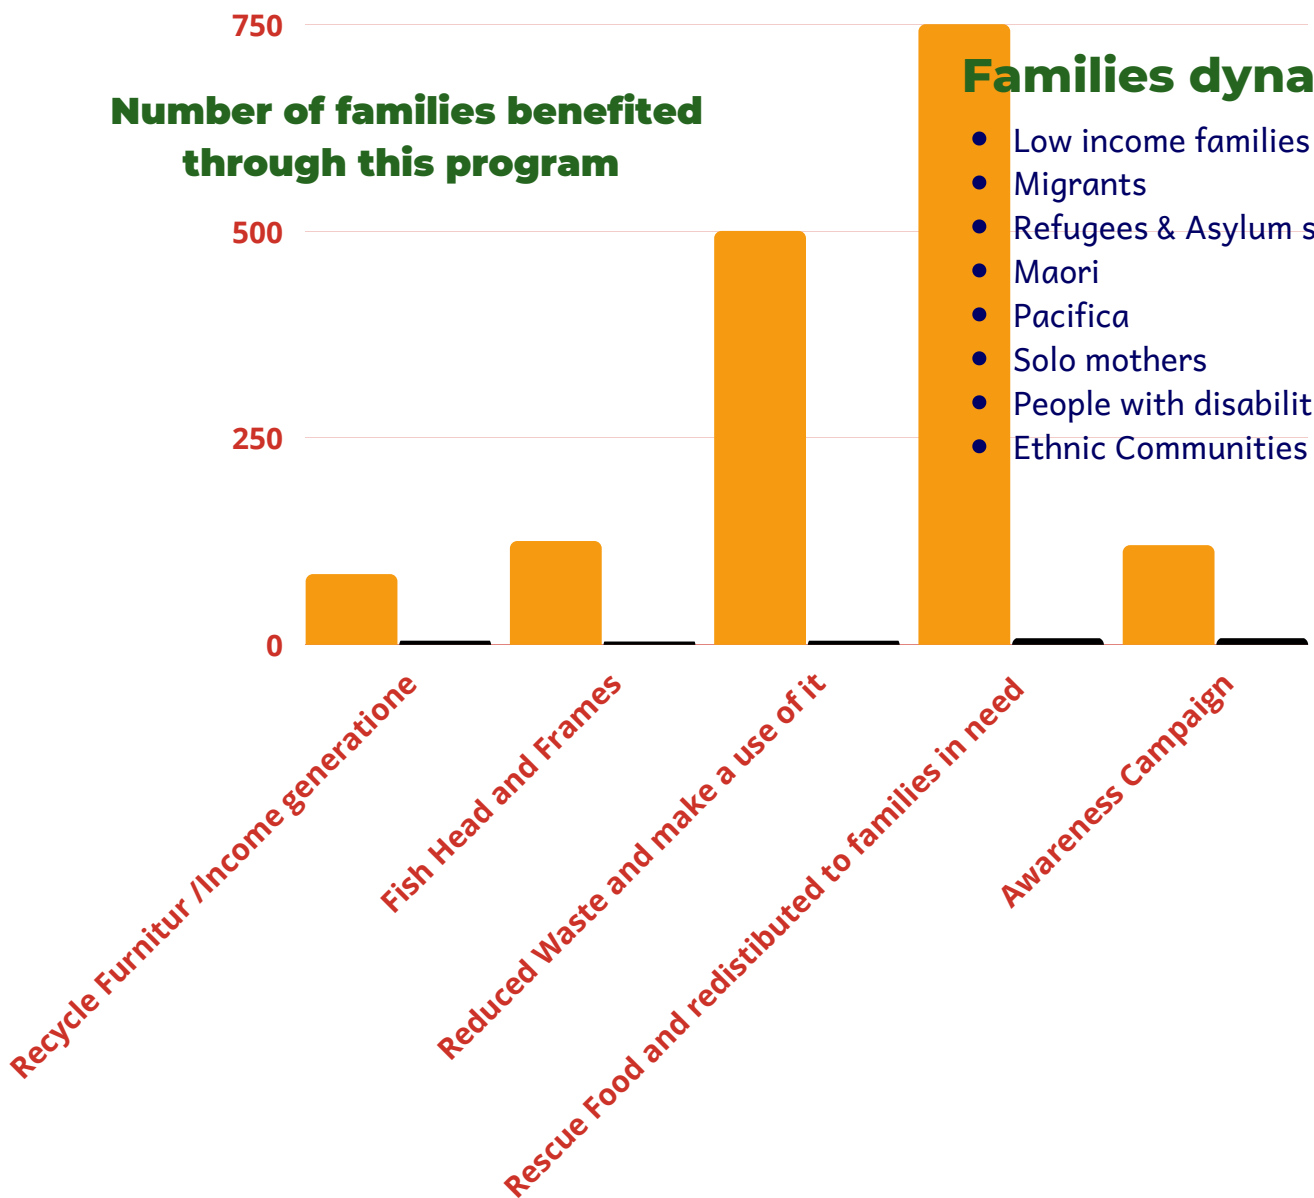

Recycled material turned into flash office

HOPE's initiative impact this financial year ended 31st March 2022

Total of 345,000 KG diverted from landfill

Number of families benefited through this program

Families dynamics

- Low income families
- Migrants
- Refugees & Asylum seekers
- Maori
- Pacifica
- Solo mothers
- People with disabilities
- Ethnic Communities
